INFO330 AB Team 5

Project : Korean Grocery E-commerce

Re Lee, Kaylee Cho, Ujin Lim, Sally Shin

02.22.2024

We decided to build a database system for Korean online grocery stores where the owners can track their overall business performance in real-time. The database system will contain tables such as - suppliers, products, category, shipper, order, payment and customers. We are planning on creating a synthetic dataset, but by referring to the real datasets that are in kaggle, princeton education website, and more.
